

AdBlue Drum Trolley for Passenger Car Workshops

25 338 836

Mobile AdBlue drum trolley for passenger car workshops. The highly manoeuvrable trolley is fitted with a 230v AC transfer pump system which delivers AdBlue into passenger cars at an adjustable flow range between 4-7 litre/min.

Spill free dispensing is assured as the unit is equipped with the both forecourt spec ZVA LV nozzle and a SEC/CDS extractor pipe.

The ZVA LV nozzle is built to the required ISO22241-5 standard for the passenger car filling and ensures spill free transfer into the vehicle without overfilling.

The SEC/CDS extractor pipe enables a clean spill free changeover when swapping drums. The system also includes a digital flow meter which measures the quantity dispensed.

Specification

Model	FMT Mobile AdBlue Drum Trolley
Type	Self priming pump
Delivery	4-7 litre/min
Motor	230v / 50hz
Power	400W
Rating	IP66
Current Draw	1.5A
Cable length	2m
Plug Type	3 pin plug
Metering	Digital inline meter
Delivery Hose	4m x 13mm ID
Filling Interface	ZVA LV ISO22241-5
Suction System	SEC/CDS extractor
Drum Capacity	210L (not included)

The robust tubular trolley is designed to hold a single 210L AdBlue drum and features a low profile loading lip making it easy to load full barrels without the risk of tipping. Additionally the rear heavy duty castor with foot brake can pivot 360° making the trolley highly manoeuvrable and easy to operate within the workplace.

Supplied complete with everything needed for dispensing AdBlue from 210L drums around the workshop in a clean and efficient manner.

Dimensions: Height: 1210 mm
Width: 820 mm
Length: 900 mm
